

# The Power of Partnerships to Advance Technology

Every government agency relies on data analytics for good decision making. And every government agency uses analysis and analytic technologies from a wide variety of technology companies.

## The Roundtable

As an industry consortium focused on the government, we are committed to learning more about government priorities and mission requirements for analysis and analytic technologies.

In this way, the Roundtable can provide better products and accelerated solutions for the U.S. government.

## The Benefits

- **Cost Savings**
- **Increased Product Interoperability and Agility**
- **Accelerated Adoption and Implementation**
- **Common Understanding and Shared Goals**
- **Technical Advantages**

# The Analysis Exchange

A priority project for the Roundtable is the Analysis Exchange (AE). A motivated team of industry, government, and The MITRE Corporation have designed architecture and technology for information exchange. Benefits include:

- Using a more interoperable, consistent, and repeatable model allow vendors to compete for acquisitions more efficiently, saving time and money.
- Products and systems can become more effective at meeting government needs and requirements with less investment of resources.
- The AE can break down the data silos that multiple analytic tools typically create.
- Member companies can adopt consistent standards more quickly, saving them and the government time and money.
- The AE can develop a set of common standards and protocols for the analysis and analytics community.
- The AE can create enriched products for government use based on the results of different companies' products.
